                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                   ö
                                                                                               The specification describes Neisseria meningitidis polypeptides designated BASB047, BASB054, and BASB069. The polymucleotides designated BASB047, BASB054, and BASB069. The polymucleotides equences can be used to create a vector to transform a host cell.

The host cell can be used to produce the polypeptide. The polymucleotides and polypeptides can be used in vaccine compositions. The polymucleotides, polypeptides, and antibodies directed against the polypeptides can also be used in composition for preparation of medicaments. The antibodies can also be used in a composition for treating humans with Neisseria meningitidis disease. The diseases that can be treated include upper respiratory tract infection, and invasive bacterial diseases such as bacteremia and meningitis. The nucleic acid sequences can be used as probes in the disgnosis of Neisseria meningitidis disease. The present sequence represents a BASB047 polypeptide.
                         Neisseria meningitidis BASB047, BASB054, BASB068, and BASB069 proteins, useful for treating N. meningitidis infections, bacteremia, and

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antiblocits, the essential genes themselves and the discovery of movel antiblocits, the essential genes themselves and the encoded proteins. The prokaryotes used are Bscherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonnas aeruginosa and Enterococcus faccalis. The protein also useful for the identification of potential new targets for antibiotic development. The antisense mucleic acids can also be used to dentify proteins used in proliferation, to expresse these proteins. The proteins can be used to soreen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen to programmes. The antisense nucleic acid sequence is also useful to screen a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Once: The sequence data for this parent did not form part of the printed sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       94 RDEHTF--IVVPASEAAVPATQARSEP-----LDMEQMEITASRISSDLVSATRQ---- 141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TKVIYBEQIQEQATGSRQLADVMAQLIPSLGVSSGTTSNFGQTMHGRQVQFLLNGVPLTG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                      The invention relates to the identification of iroNec gene, from an extraintestinal isolate of Bscherichia coli. This gene is expressed in increased amounts in human urine and is identified by transposon (TnphoA) mutagenesis. iroNec gene encodes an extracytoplasmic protein. This gene can be used as an immunogen in vaccine formulations. The recombinant vector
                                                   comprising nucleotide sequence encoding one or more antigenic epitope of iroNec is useful for diagnostic and immunotherapeutic purposes. The iroNec antigenic peptide is useful for treating or preventing extraintestinal infections (BIB) caused by extraintestinal infections (BIB) caused by extraintestinal pathogenic B. coli (ExpEC). The BIS include urinary tract infection (UTI), meningitis, intra-abdominal infection
                                                                                                                                                                                                                                                                                Novel isolated iroNec polynucleotide from extraintestinal isolate Escherichia coli useful as vaccine for treating or preventing extraintestinal infections caused by extraintestinal pathogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Misc-difference

              Porphorymonas gingivalis (PG) polypeptide sequences given haviatile to AAX914583. AAX91802 to AAX91989 represent PCR primers used in the aclation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.

AAX91802 to AAX91989 represent PCR primers used in the stolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        KQ--SGFNNMTDIL-KTQSSLDVIQYPGFSSNIGIRGFKPSGKYVTVLVNGIP-AGTDNI 183

                                                                                                                                                                                                                                                                                                           AAX91536 to AAX91801 encode two hundred and sixty six antigenic Porphorymonas gingivalis (PG) polypeptide sequences given in AAX14318 to AAX94503. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Agius
                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                   used as vaccines especially against Porphorymonas gingivalis. Probes be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09-APR-1998

                                                                                                                                                                                                                                                                                                  AAX91536 to AAX91801 encode two hundred and sixty six antigenic Porphorymonas gingivalis (PG) polypeptide sequences given in AAY44318 to AAY34583. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, desorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG303077 represent novel human changing channo acid sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               strains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and encoded proteins (ABB52459-ABB85919 and ABB88729 and ABA89533) and encoded proteins (ABB52459-ABB52919 and ABB82994-ABB53094) of nature B2/D+A-. The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. coli infections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.
                                                                                                                                                                                                                                                                               Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                 Novel human diagnostic protein #17909.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 6; Fig

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations in CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

The DNA sequence (AAT34137) which encodes the biosynthetic enzymes of icosapentaenoic acid (EPA) can be used to transform Escherichia coli. The DNA sequence allows efficient microbial production of EPA, which is a raw material for drugs, agrochemicals, foods and animal feedstuffs. EPA is also useful for lipid balance correction and as an antihypertensive, antinflammatory and anticancer agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GSRQLADVMAQLIPSLGV-----VPL 118

The PKS-like genes are used to transform plants and microbial cells to give recombinants having altered contents of PUFA (specifically PLBA and EPA). Oils from these CK plants are useful as dietary supplements (in infant feeeding CK plants are useful as dietary supplements (to infant feeeding CK formulations, to give a PUFA profile closer to that of human milk; for treating malnutrition; in intravenous feeding formulations; in cooking CK cholesterol levels. Fragments from the genes are useful as probes to cooking CK cholesterol levels. Fragments from the genes are useful as probes to CK genes. The method facilitates large scale production of PUFA by providing CK can be appression of PUFA in seeds allows simple recovery, as oil which can be engineered to have a particular PUFA profile. Expression in microbes also CK can seed to have a particular PUFA profile. Expression in microbes also CK can seed to have a particular PUFA profile. Expression in microbes also CK can be engineered to have a particular PUFA profile. Expression in microbes also CK can be engineered to excernal variables such as weather or food supply. Sequences

CK can be called to have a particular of FUFA profile and is not subject to called the profile and is not subj

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel DNA sequences encoding for polyketide (PK)-like synthesis (FKS-like) pathway genes from Shewanella, Vibrio and Schizochtrium. The muclade acids are useful for isolating related molecules or in methods to detect organisms expressing the PKS-like genes. They are also useful for creating transgenic plants that express poly-unsaturated long chain fatty acids. The poly-unsaturated long chain fatty acids produced recombinantly are useful as dietary supplements for patients undergoling intravenous feeding or for preventing or treating malnutrition. The poly-unsaturated long chain fatty acids can also be incorporated into cooking oils, fats or margarine formulated so that in normal use the recipient receives a desired amount of poly-unsaturated long chain fatty acids. The nucleic acids are also useful in large scale production of docosabexenoic acid, and eicosapentenoic acid, and for the modification of the fatty acid profile of host cells and edible plant tissues and/or plant parts. Transgenic production of polyunsaturated fatty acids in particular host cells allows quicker purification from natural sources such as fish or plants. This sequence represents the shewanella putrefaciens PKS protein cluster ORF4 which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a Neisseria meningitidis BASB053 polypeptide, or an antibody immunospecific for BASB053 may be identified in a biological sample in order to diagnose a Neisseria meningitidis infection in an animal. The BASB053 polypeptides and polynucleotides may be used as vaccines, for spentating an immune response in an animal. A composition comprising at least one antibody immunospecific for BASB053 may be used to treat humans infected with Neisseria meningitidis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IYEEQIQEQATGSRQLADVMAQLIPSLGVSSGTTSNFGQTMHGRQV-QFLLNGVPLTGSR 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polymucleotides and polypeptides. AAZ54537 to AAZ54576 and AZ54616 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polymucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                        The inversion relates to isolated polymuchecities (1) and polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuchecides are also used in disponstics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for identifying expressed genes. (II) is useful in gene therapy rechniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical maging of stless expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. The invention relates to a library of DNA fragments of Escherichia colistrains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and encoded proceins (ABB52459-ABB852919 and ABB529594-ABB53094) of nature B2/DAA-. The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. colinfections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal finfection that include systemic and non-diarrhoal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                     of DNA fragments of Escherichia coli atrains for the determination of a given strain comprises polynucleotides of

The DNA sequence is also referred to as the TbpB gene. The TbpB gene is used to produce recombinant Tbp2; for identification or diagnosis of Moraxella, or for cloning related species, using hybridisation assays; and for genetic immunisation against Moraxella infections, e.g. otitis media. The Tbp2 proteins are useful as antigens, either in vaccines (including components of conjugate vaccines that contain antigens from other bacteria or from tumours, in which case they elicit production of antitumour antibodies that may be coupled to chemotherapeutic agents or biologically active agents) or to raise antibodies (for use as diagnostic reagents and for treating Moraxella infections), also for detecting Moraxella antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Myers LE,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A candidate adhesin (AAR75366) was identified that is a homologue of the IrgA protein of Vibrio cholerae. The adhesin enables Escherichia coli O157:H7, an antibiotic-resistant, virulent and common food-borne pathogen, to adhere to epithalial calls.

Recombinant adhesin was obtd. by expression of the encoding sequence (see AAT1015) in E. coli HBIOI (pear). The adhesin can be used as a vaccine for immunisation of cattle against disease or colonisation of mucosal surfaces by O157:H7, thus increasing the safety of food

polypeptide (II) sequences (I) be useful as hybridisation probes, polypeptide (II) sequences (II) brimers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome might and game mapping, and in recombinant production of (II). The color polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful in medical in medical in medical in produces involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in Changonstice, forensics, gene mapping, identification of mutantions responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human and sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

 polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in case thereof.
                                                                                                                                      New isolated polymucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical cinaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention. CC specification, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                    The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes their use in the discovery of novel antibioties, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella con espeudomoniae, Pseudomonas acruginosa and Enterococcus facefuls. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part
of the printed specification, but was obtained in electronic formation in the control of the printed specification, but was obtained in electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is the Moraxella catarrhalis 4223 transferrin binding protein thph, which can be used as an immunogen, e.g. in vaccines to protect against diseases caused by M. catarrhalis (specifically otitis media), or to raise antibodies for diagnosis and therapy. It can also be used as a carrier for other antigenic determinants, e.g. of bacteria containing polysaccharide antigens or abnormal polysaccharides present on tumour cells, particularly to make conjugate vaccines. The tuppa DNA can be used to detect nucleic acid encoding transferrin receptor protein, e.g. for diagnosis or gene isolation, by usual hybridisation assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indels 110;

                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (II), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative cis neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, soluciar disorders e.g. cardiac arrest, soluciar disorders e.g. Alzheimer's disease and amylotrophic lateral selerosis, infections caused by bacterial viruses e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. cepiracy disorders e.g. nonallergic thinitis, renal disorders e.g. cepiracy failure and blood related disorders e.g. myocardial creation. The polypeptides can also be used to aid wound healing and cepithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The propertive or prevent skin segment to prevent to the propertive or prevent in the propertive or prevent skin segment to prevent to the propertive or preventive to prevent skin segment to prevent to the propertive or prevent skin segment to subburn, to be the propertive or prevent skin segment to be used to a provent to the propertive or preventive to be used to a proventive to preventive to be preserved to the propertive or preventive to the propertive or preventive to the propertive or preventive to the propertive or pre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               increase or decrease storage capabilities, fat content, lipid, protein,

The invention relates to novel isolated polypeptides (1), and CC polynucleotides (II). (II) and the antibody to (I) are useful for CC disgrosing, preventing and treating diseases including immune system CC disorders (e.g. congenital and acquired immunodeficiencies, autoimmune CC transplant rejections and graft versus host disease, infectious diseases CC (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and CC disorders, primary haematopoietic disorders, hyperproliferative CC disorders (e.g. Gaucher's disease and cancer), neurodegenerative CC disorders (e.g. Alzheimer's disease, Parkinson's disease), chromosomal CC abnormalities (Down Syndrome), ischaemic injury (e.g. stroke), renal CC disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. disease), reproductive system disorders (e.g. disease), reproductive system disorders (e.g. disease), reproductive system disorders (gastrointestinal CC disorder (inflammatory disorders), liver disorders (gastrointestinal CC disorder (inflammatory disorders), liver disorders (gastrointestinal CC as stimulators of B-cell responsiveness to pathogens, activators of CC T-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency CC syndrome (AIDS). AAU17059-AAU17683 represent novel signal transduction gathway protein, amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-NOV-2000;

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders

Claim 1; SEQ ID No 707; 880pp; English

The invention relates to novel isolated polypeptides (I), and displaying immunosing, preventing and treating diseases including immune system displaying they preventing and treating diseases including immune system displaying they preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune transplant rejections and graft versus host disease, infectious diseases (e.g. rhepatiss C), bleeding disorders, inflammatory conditions, organ transplant reflections and graft versus host disease, infectious diseases (e.g. hepatiss C), bleeding disorders (sickle cell anaemia), myeloproliferative disorders (e.g. daucher's disease and cancer), neurodegenerative disorders (e.g. Alzheimer's disease and cancer), neurodegenerative disorders (e.g. plomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermacological disorders (e.g. arrhythmia), respiratory disorders, dermacological disorders (e.g. arrhythmia), preprintion proliferation, endocrine disorders (e.g. Addison's disease), liver disorders (cirthosis), disorders (inflammatory disorders), liver disorders (cirthosis), as stimulators of B-cell responsiveness to pathogens, activators of

It shows homology to TonB-dependent outer membrane proteins of other bacteria, and was identified from an open reading frame (see also AAT44519) located downstream of the TN106 hxuA gene. Another outer membrane protein, HxuB (AAW01464, see also AAW01465), similarly identified. Recombinant HxuC and HxuB proteins can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Genes encoding H. influenzae HxuC protein(s) - useful in the prepn. H. influenzae infection
                                                                                    GHPO protein; Helicobacter infection; peptic ulcer disease.

This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for
              protein; Helicobacter infection; gastroduodenal disease; gastritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EQATGSRQLADVMAQLIPSLGVSSGTTSNF------GQTMHGRQVQFLLNGVPLT 119

                                                                                                                                                                                                                                                                                                                                                                                     рę
                                                                                                                                                                                                                                                                                                                     This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for

                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel outer membrane protein (I) from Helicobacter pylori, a fragment of (I) or a protein (II) with the same immunogenic characteristics which has antibacterial activity. The products of the invention are used in immunogenic compositions, particularly in protective vaccines, to raise specific antibodies and as immunoassay reagents for diagnosting acute, chronic or early infection by Helicobacter pylori, by complex formation with antibodies. The antibodies are used as diagnostic immunoassay reagents, for passive protection
                                                                                                                                                                                                                                                                                                                                                         against H. pylori infection, for immunoprecipitation of (I) and for isolating (I)-related proteins from cDNA expression banks. This sequence represents the Helicobacter pylori membrane protein described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Outer membrane protein; antibacterial; vaccine; infection; diagnosis; passive protection; immunoprecipitation.

It can also be used as carrier for other antigenic determinants, e.g. of bacteria containing polysaccharide antigens or abnormal polysaccharides present on tumour cells, particularly to make conjugate vaccines. The tbpA DNA can be used to detect nucleic acid encoding transferrin receptor protein, e.g. for diagnosis or gene isolation, by usual hybridisation assays.

                    A bacterial haemoglobin receptor (AAR95568) was identified as the product of the hmbR gene (AAT27000) of N. gonorrhoeae strain MS11A. The haemoglobin receptor is thought to be involved in hemin utilisation by the bacterium. This dependence on host iron stores is a potential route for therapeutic intervention strategies. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TbpB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Salmonella cells. It is useful as a vaccine for gonorrhoea, or can be used to raise antibodies of diagnostic appln. Similar receptor proteins were obtd. from N. meningitidis serotypes A (AAR95566), B (AAR95567) and C (AAR95565).
                                                                                                                                                                                                                                                                                                                                           17-JUN-1999

                                                                                                                                     Porphorymonas gingivalis (PG) polypeptide sequences given in AAY34318 to AAY34583. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis, Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease

Porphorymonas gingivalis (PG) polypeptide sequences given in AAV34318 to AAV31583. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines sepecially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridiaation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          91 GVSSGTTS-NFGQT----MHGRQVQFLLNGVPLTGSRDISRQLNSINPNQVARIEVL-SG 144

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a library of DNA fragments of Escherichia colistrains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and encoded proteins (ABB52459-ABB5299) and ABB52994-ABB53094) of nature B2/D+A. The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E.-coli infections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septiceemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature B2/D+A--
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunosuppressive; extra-intestinal infection; phylogeny; systemic infection; non-diarrhoeal infection; septicaemia; pyelonephritis; antibiotic resistance.
